Norge Mining

NORGE MINING LTD

("Norge Mining" or the "Company")

Appointment of Project Director

Norge Mining, the Anglo-Norwegian mineral exploration company with a world-class resource of Critical Raw Materials in southwest Norway, is pleased to announce the appointment of Tim Galusky, a highly experienced project management professional, in the newly created role of Project Director.

Tim, who graduated in construction management at Arizona State University in the US, has extensive international experience of managing major capital projects in the mining sector, from concept through start-up to commissioning. During the past 25 years, he has worked throughout North, Central and South America and Africa on more than a dozen different projects.

Most recently, Tim was Director of Expansion Projects at Equinox Gold's Los Filos gold mine in Mexico, leading an underground mine expansion and engineering efforts for a carbon-in-leach process plant. Prior to that role, he was Project Manager at the Lindero Project in Argentina, a greenfield gold project. From 2014-2017, he was Project Manager at the Sierra Gorda Oxide Project, a major copper project in Chile. Other greenfield projects that Tim has worked on include the Morenci Mine for Leach Project and the Safford Leach Projects in Arizona, where he was Construction Manager.

At Norge Mining, Tim will lead the development of the Bjerkreim Exploration Project through pre-feasibility and feasibility studies and then through the planning, permitting, construction and commissioning of the Company's first mine. Importantly, his breadth of international experience has given him a profound insight into the environmental, sustainability and social responsibility aspects of exploration and mining projects, which he will apply to the Bjerkreim Exploration Project.

John Vergopoulos, Chief Executive Officer of Norge Mining, said:

"We are delighted to appoint Tim Galusky as our Project Director, a new role that underlines the progress we are making in our exploration work. Tim has very substantial international experience gained during 25 years of project management and consulting work. He has a strong track record on safety, quality and best practice and a strong commitment to sustainability, which are all essential for the successful development of the Bjerkreim Exploration Project.

"We look forward to working with Tim as we advance our plans to become a strategic producer of Critical Raw Materials in Europe, creating positive impacts locally, nationally and regionally."

About Norge Mining

Norge Mining Ltd is an Anglo-Norwegian natural resources company focused on mineral exploration in Norway.

The Company's Mineral Resource Estimates from the Bjerkreim Exploration Project have confirmed world-class deposits of the EU Critical Raw Materials phosphate, vanadium and titanium. The provenance of these materials is of significant strategic importance for net carbon zero commitments, a key requirement for which is supply chain transparency.

Norge Mining holds 61 exploration licences, totalling more than 520 square kilometres, in southwest Norway through its 100%-owned Norwegian subsidiary, Norge Mineraler AS. The Company's programme of exploration work, building on earlier studies by the Geological Survey of Norway (NGU), is now in the prefeasibility study stage.

Founded in November 2018, the Company is headquartered in the UK and its ambition is to become a substantial, sustainable and strategically important exploration and mining business focused on Critical Raw Materials.
